(54) Title: A COMPUTEP, SYSTEM AND METHODS THEREFOR

(57) Abstract: A distributed computer network includes a front interface on a first computer and a corresponding back interface on a second computer wherein instructions communicated from the first to the second computer can be selectively encoded from a set of one or more available encodings. Instructions may also be communicated by encoding the instruction according to a communications protocol selected from a set of available communications protocols. Claims are also directed to a virtual computer, a method of executing an instruction in a virtual computer, and a data format.
